

Alert ticket

Phishing incident A-2703. Financial services SOC.

Ticket ID	Alert	Severity	Details	Ticket status
A-2703	SERVER-MAIL. Phishing attempt, possible download of malware.	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated

Ticket comments

Alert: a phishing email was sent to HR (hr@inergy.com) containing a password-protected executable attachment (bfsvc.exe) disguised as a job applicant's resume and cover letter, and the recipient may have downloaded and opened it.

Reason for escalation: The attachment's file hash (54e6ea47...527f6b) has been verified to be malicious. The email also shows multiple phishing indicators: a spoofed, non-corporate sender address on a .su domain (76tguyhh6tgftrt7tg.su) with a mismatched display name, a subject and body containing several spelling and grammar errors, and a password-protected .exe attachment whose password (paradise10789) was supplied in the email body, a common technique to evade email malware scanning. Because the attachment is confirmed malicious, the phishing playbook (Step 3.1 to Step 3.2) directs escalation, so the status was moved from Open to Investigating to Escalated and a level-two SOC analyst has been notified rather than the ticket being closed.

Additional information

Known malicious file hash: 54e6ea47eb04634d3e87fd7787e2136ccfbcc80ade34f246a12cf93bab527f6b
